

In each discussion, you will have to finish each of the following problems.
Use your notes and ask questions if you have any questions!

The link to the book is found on my [website](#), get into the habit of going to the book and doing the problems there! This book is usually what Professor Paulin and other math professors would use to assign problems!

Book Problems:

Section 1.1:

- #3, #4, #7-10, #27, #31-37 odd, #69, #74-76 even

Section 1.5

- #3-11 odd, #21-26 odd
- #49
- #57

(S1.1) Determine the points at which the graphs of $f(x) = 2x^4 + 6x^3 - 3x + 3$ and $g(x) = 2x^4 + 3x^3 + 3$ intersect.

Explain why the function $f(x) = x^{10} - 5x^8 + 3$ does *not* have an inverse.

Challenge Question:

(S1.1) Find an expression for the function whose graph is given by the bottom half of the circle

$$(x - 1)^2 + (y - 3)^2 = 9$$
